#### **FIRST DOUGH**

|        | PREPARATION   |
|--------|---|
| g 6500 | Knead DOLCE FORNO, yeast and all the dose of water indicated in the recipe.                             |
| g 2500 | When the dough begins to take shape pour the sugar and then the yolks gradually in more than            |
| g 500  | once and keep on kneading until the dough is well-combined and smooth.                                  |
| g 1600 | At the end, add softened butter in 3-4 times.   |
| g 2000 | Make sure that the temperature of the dough is 26-28°C.   |
| g 30   | Let rise for 12-14 hours at 22-24°C with the 70-80% of relative humidity. If the proofer room is devoid |
|        | of humidifier, cover the dough with a plastic cloth.  |
|        | The dough shall quadruple its initial volume.   |
|        | ADVICE:   |
|        | g 2500<br>g 500<br>g 1600<br>g 2000   |

- We suggest to cut out a 250g piece of dough and to put it into a 1L jug to check the pace of the leavening and verify the quadruplication of the volume.

- If the temperature of the first dough is above 28°C, it will be necessary to decrease the leavening

# SECOND DOUGH

# **INGREDIENTS**

| DOLCE FORNO             | g 3500 |
|-------------------------|--------|
| EGG YOLK                | g 1350 |
| UNSALTED BUTTER 82% FAT | g 700  |
| MASCARPONE CHEESE       | g 1730 |
| CASTER SUGAR            | g 700  |
| HONEY                   | g 350  |
| SALT                    | g 100  |

# PREPARATION

| The next morning, the dough shall be slightly curved.  |
|--|
| Add DOLCE FORNO and water to the first dough and knead for 5-10 minutes.                               |
| When well-combined, add sugar, salt and one part of egg yolk. Then add the remaining egg yolk in       |
| two times.   |
| Meantime, prepare a mixture of softened butter and honey. Once the mixture is ready, add it to the     |
| dough in 4 times.  |
| Add in two-three times the mascarpone cheese.  |
| Add the almond and coffee inclusions and mix.  |
| Let the dough rest in the proofer room at 28-30°C for about 90 minutes.                                |
| Divide the dough into portions of the required size and roll each portion up into into a ball shape.   |
| Move onto boards or trays and leave to rest at 28-30°C for another 20 minutes.                         |
| Roll them up tight again and transfer into the specific paper moulds.                                  |
| Put in the proofer room at 28-30°C with relative humidity of about 60-70% for 4-5 hours, until the top |
| of the dough nearly leans out of the edge of the mould (1 cm below). If the proofer room is devoid of  |
| humidifier, cover the dough with plastic sheets.   |
| At the end of the rising, leave the panettoni exposed to the air for 10-15 minutes until a light film  |
| forms over the surface.  |
| With a small, sharp knife, make two superficial cuts to create a cross (these cuts shall not be deep   |
| and are necessary to give end product the typical and traditional shape).                              |
| Cut the dough under the 4 flaps while throwing and folding them back, then place a pat of butter and   |
| return the 4 flaps back to the original position.  |
| Bake at 165-185°C, time depending on the weight (consider about 35-40 minutes for 500g panettoni       |
| and 50-60 minutes for 1000g ones), until the temperature of the center reaches 92-94°C.                |

As soon as they are removed from the oven, the panettoni should be flipped upside down with the specific toothed racks and left to cool for 8-10 hours at least before being wrapped in Moplefan bags.
