Make sure that the temperature of the dough is 26-28°C.

We suggest to cut out a 250g piece of dough and to put it into a 1L jug to check the pace of the leavening and verify the quadruplication of the volume.

Let rise for 12-14 hours at 22-24°C with the 70-80% of relative humidity. If the proofer room is devoid of humidifier, cover the dough with a plastic cloth.

The dough shall quadruple its initial volume.

Divide the dough into portions of the required size and roll each portion up into into a ball shape.

Move onto boards or trays and leave to rest at 28-30°C for another 15-20 minutes.

Roll them up tight again and transfer into the specific paper moulds.

Put in the proofer room at 28-30°C with relative humidity of about 70% until the top of the dough nearly leans out of the edge of the mould; if the proofer room is devoid of humidifier, cover the dough with plastic sheets.
